I competed for the senior secondary education in govt school and 62% and 70% in PCM with 71 marks in Jee Main

Project

Mi Clone, react fronted project

this web app is hosted on git-profile I create this with the dynamic array data which was displayed with exactly similar styling

Note Making App,

React Node.js Express MongoDB

This app is thought by myself and created all the APIs in the backend with access to cloud database mongo Atlas and properly use of the middleware and the proper validation check at the database as well in APIs too.

The frontend work is done with all npm packages like redux Axios react-router-dom and uses all the hooks of, React library and with proper validation custom code in javascript and HTML with decent CSS.

GEARbest, Ecommerce Web App Coupon Base Company, Group Project

It is also hosted on git-hub and Netlify too this is a group project which builds with pure Html CSS Javascript only front-end work. My task is to build the product page successfully build the Product page which is directed to the Cart page and some filter are also there for the sorting of item
